Overview

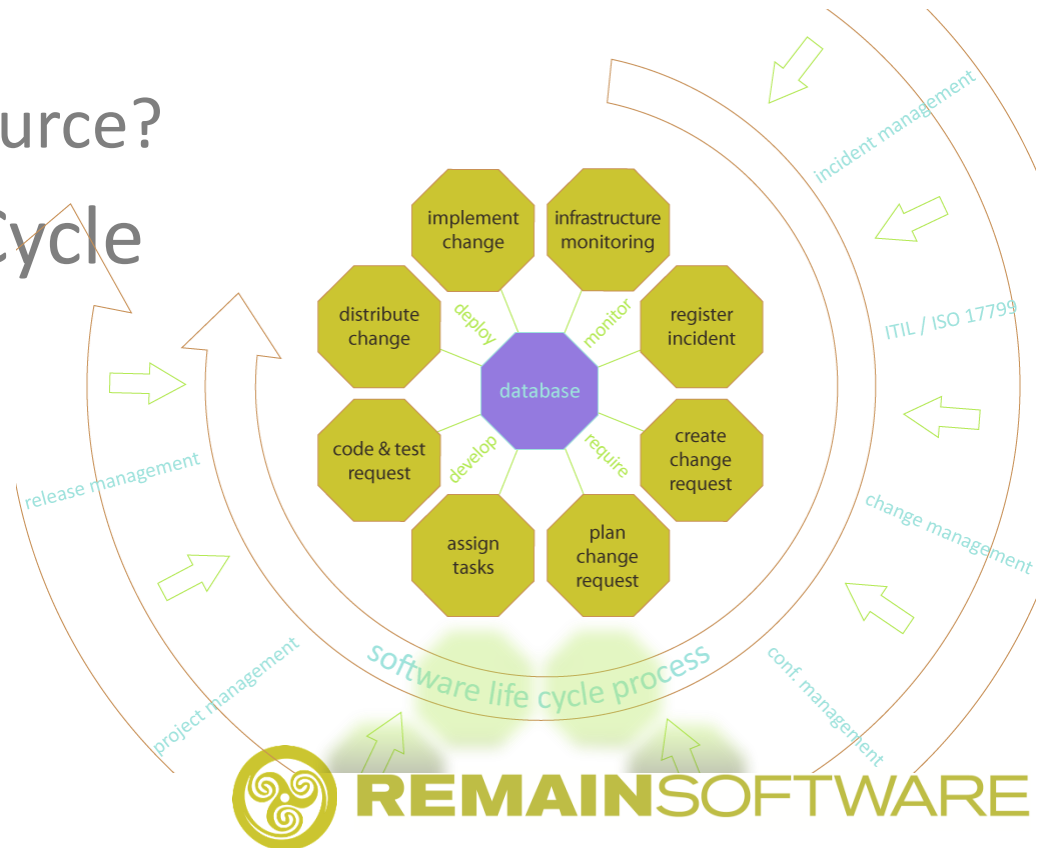

>TD/OMS

> Object Management

> What is it?

> What about the Source?

> The Software Life Cycle

➤ Object

- Is something that is considered an object, either by i5/OS or by a fourth generation language
- Is also something that is defined by a TD/OMS user. We call these virtual objects
- Must be declared towards TD/OMS. Declaring means storing the name, type and location of the object into the ***object file***
- Is uniquely identified by these three attributes and can be managed by TD/OMS

Overview – Main Entities

>TD/OMS

> Picture

➤ Detail

- Is stored in an object
- Has the property to act like a maintainable entity
- Messages in a message file and sources in a source file are examples of details

Overview – Main Entities

>TD/OMS

> Picture

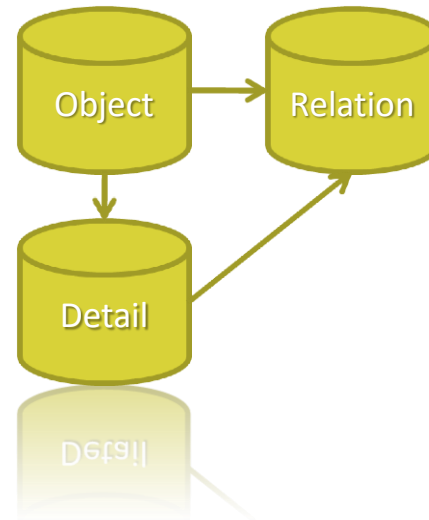

➤ Relationship

- Is a dependency between two objects
- Has the concept of ***used by*** and ***using***.
- Program ***using*** logical
- Physical ***used by*** logical

Overview – Main Entities

>TD/OMS

> Picture

➤ Application

- Is a collection of objects that have to be managed as a whole
- Is a collection of objects that serve the same goal
- Examples are financial application, logistic application, tool application, etc.

Overview – Main Entities

>TD/OMS

> Picture

Overview – Main Entities

➤ TD/OMS

➤ Request

➤ Is a request for change

Overview – Main Entities

>TD/OMS

> Picture

Overview – Main Entities

➤ TD/OMS

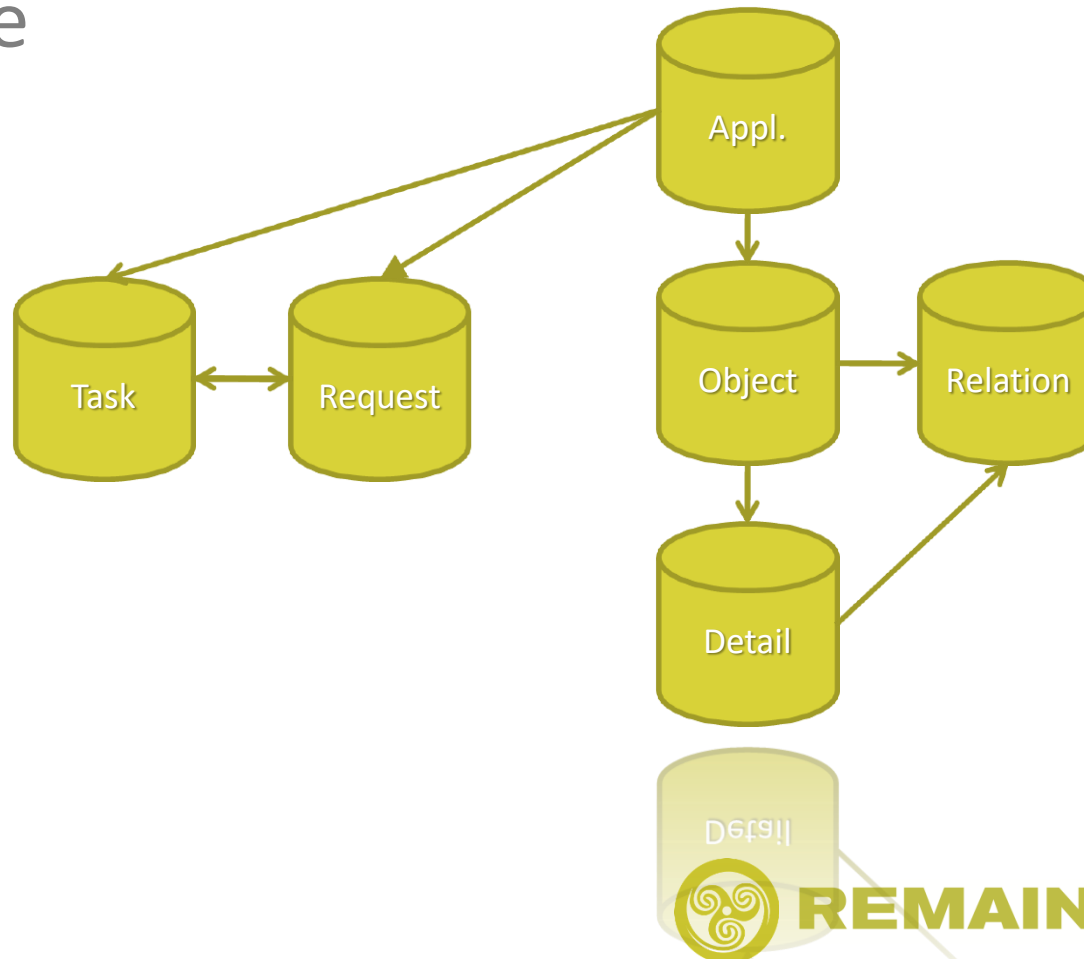

➤ Fix

- Is a Unit of Work
- Can be Part of a Release
- Can be connected to a Request
- Contains objects (solutions)
- Also known as Task

>TD/OMS

> Picture

Overview – Main Entities

➤ TD/OMS

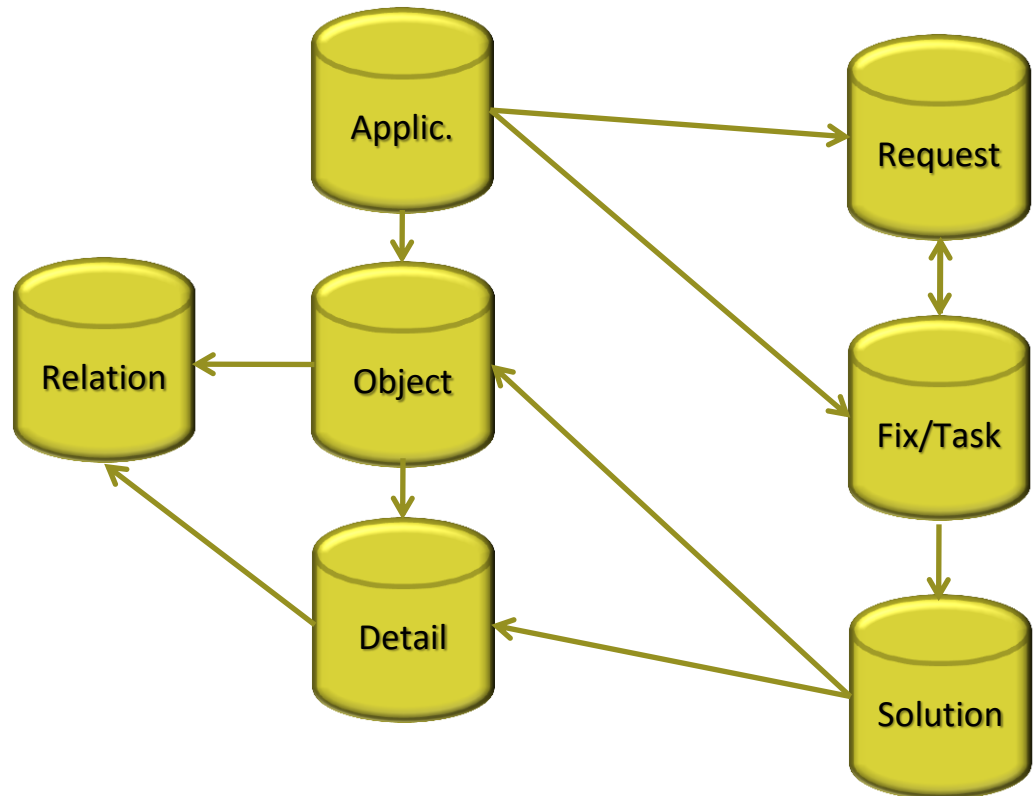

➤ Solution

- Is an object or a detail
- Is connected to a Task
- Can be transferred

➤ Multiple versions

➤ Cycle Patterns

➤ Base and Variance

➤ Request Management

➤ Registration of work

- Incidents
- Change Requests

➤ Requirements Management

- Tasks
- Planning

➤ Transfer

- Physical object movement between environments
- Copy Down (e.g. Prod-Dev)
- Move Down (e.g. Test-Dev)
- Move Up e.g. (Acc-Prod)
- Move Up with *KEEP (No Copy up)

➤ Distribution

- Distribute across Network
- With or without sources
- Monitored by Remote Job Monitor
- Distribute Objects (A)
- Distribute Transfer Command (B)

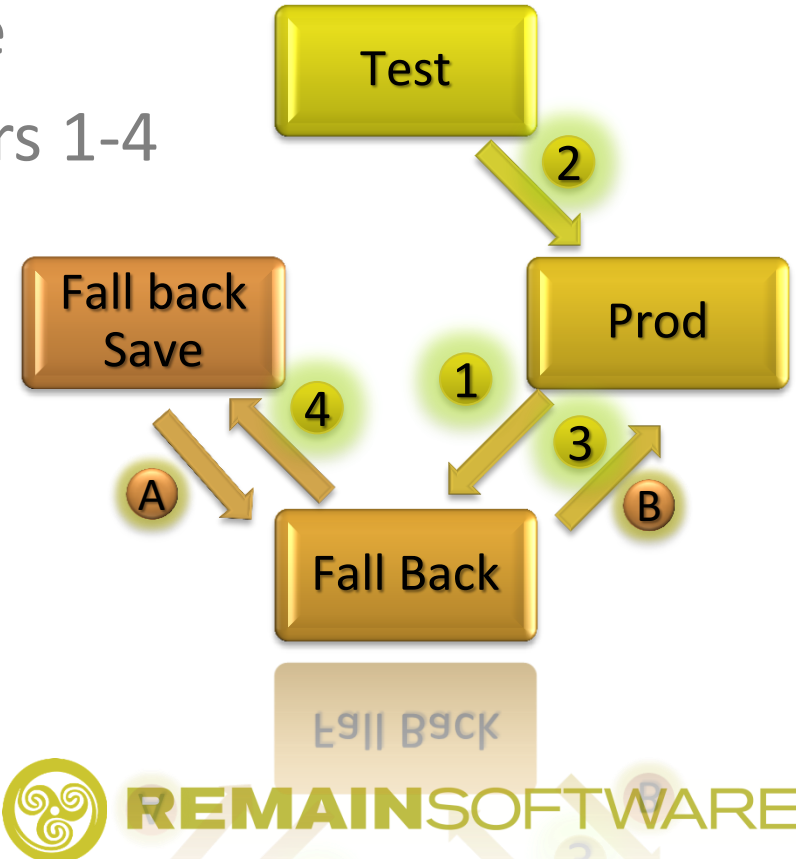

Overview – Main Processes

➤ TD/OMS

➤ Fall Back

- Returns to a previous state
- Automatic: Atomic transfers 1-4
- Manual: A-B

Overview – Main Processes

➤ TD/OMS

➤ Ratification

➤ Approval of changes

➤ Exceptions

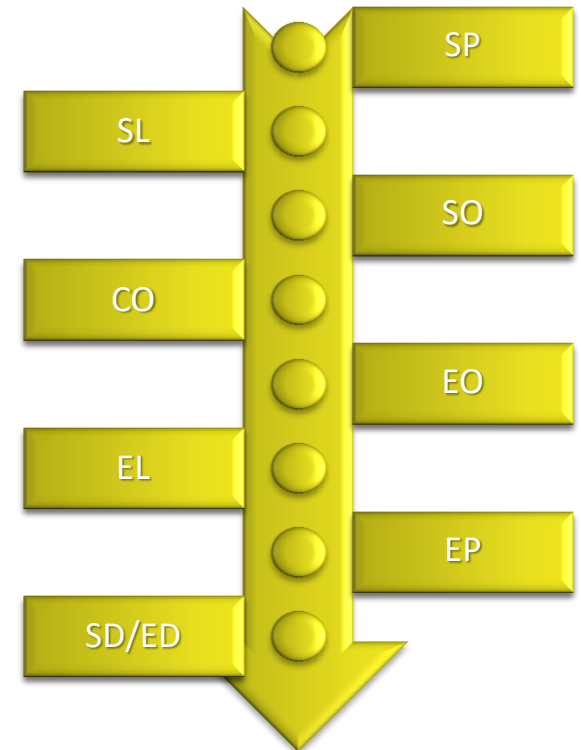

- Simple User Exit Mechanism

➤ Actions

- Advanced User Exit Mechanism
- Used for Compilation
- Special Attribute Settings
- Special Authorization
- Etcetera ...

Overview – Exceptions & Actions

➤TD/OMS

- What is the difference between a solution and an object
- What is the relationship between a fix and a request
- What environments are used in your organisation
- What might be the meaning of the term *Parallel Development*
- What could happen if a quick change of an object is necessary
- What does this mean if that object was already present in the cycle
